

NEXT.js

[HOME](#)[ABOUT NEXT.js](#)[OUR PORTFOLIO](#)

Hello! Next.js

NEXT.js is a Framwork of React and React is a library

[About NEXT.Js](#)[Our Portfolio](#)

What's is Next.js?

Everything you need to build great products on the web.

Next.js is a React framework for building full-stack web applications. You use React Componentsto build user interfaces, and Next.js for additional features and optimizations. Under the hood, Next.js also abstracts and automatically configures tooling needed for React, like bundling, compiling, and more. This allows you to focus on building your application instead of spending time with configuration. Whether you're an individual developer or part of a larger team, Next.js can help you build interactive, dynamic, and fast React applications.

Our Journey With Caching

Frontend performance can be hard to get right. Even in highly optimized apps, the most common culprit by far is client-server waterfalls. When introducing Next.js App, we knew we wanted to solve this issue. To do that, we needed to move client-server REST fetches to the server using React Server Components in a single roundtrip. This meant the server had to sometimes be dynamic, sacrificing the great initial loading performance of Jamstack. We built partial prerendering to solve this tradeoff and have the best of both worlds.
